

Tech Stack Logos

SIH26171 — Privacy-Preserving Vision Agent | Team REGEX | 20 marks, grouped as on the Technical Approach slide

For the best result, use the PNG files rather than copying from this page. Each image below is ppt-assets/labelled/<name>.png — a single transparent 640×760 file with the logo above its caption, so dragging one into PowerPoint gives you both, already aligned, at full resolution. Copying a region out of a PDF gives a screen-resolution bitmap instead, which shows on a projector. Plain unlabelled marks are in ppt-assets/logos/ as PNG and SVG.

The captions are **dark text on transparency**, sized for a light slide. On a dark background use the unlabelled marks and set your own caption colour.

Regenerate with node scripts/make-logo-sheet.mjs. Marks are their owners' trademarks, used to identify the technologies this project builds on. **OpenAI, Playwright, WXT, WebGPU and Manifest V3 are our own lettering**, not official artwork — no free mark exists for them, and substituting a lookalike would put the wrong company's logo on a slide.
